

Chile National Net: Geodetic Overview

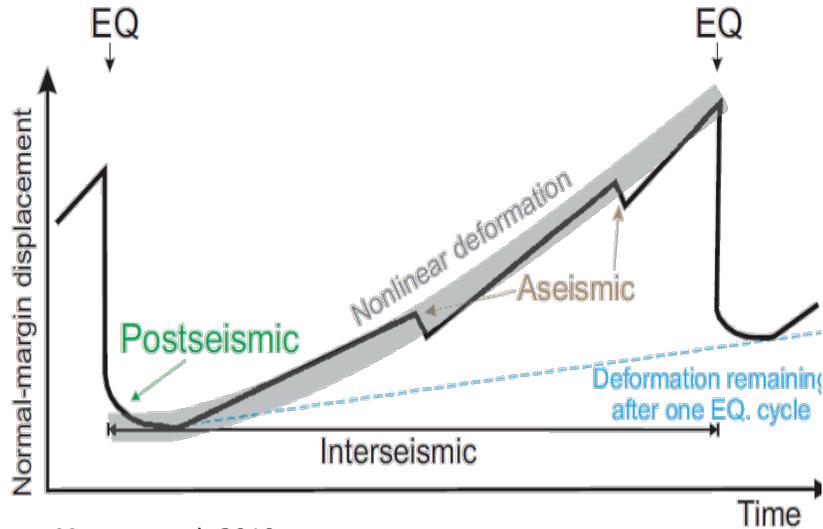

*Juan Carlos Báez - et al.
Centro Sismológico Nacional
Universidad de Chile
jcbaez@csn.uchile.cl*

Outline

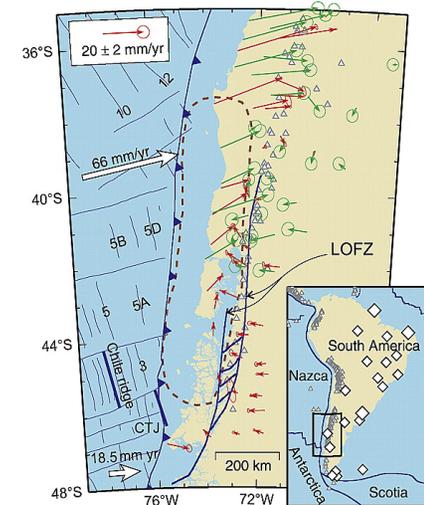

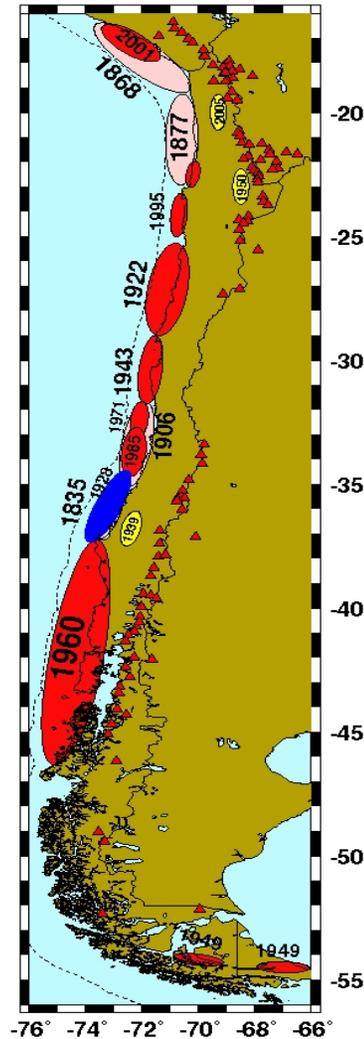

- What we want to observe with C-GNSS?
- Status of all of GNSS network in Chile
 - First stations
 - Scientific networks
 - CSN, current status
 - Monumentation
- Network design for EW
- Schedule of CSN solutions
- Results
- Final remarks

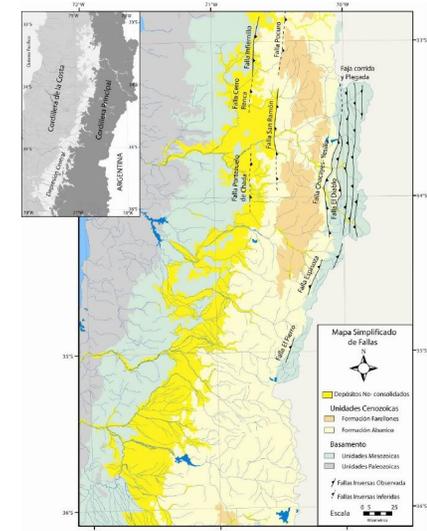

What we want to observe with C-GNSS?

Moreno et al, 2010

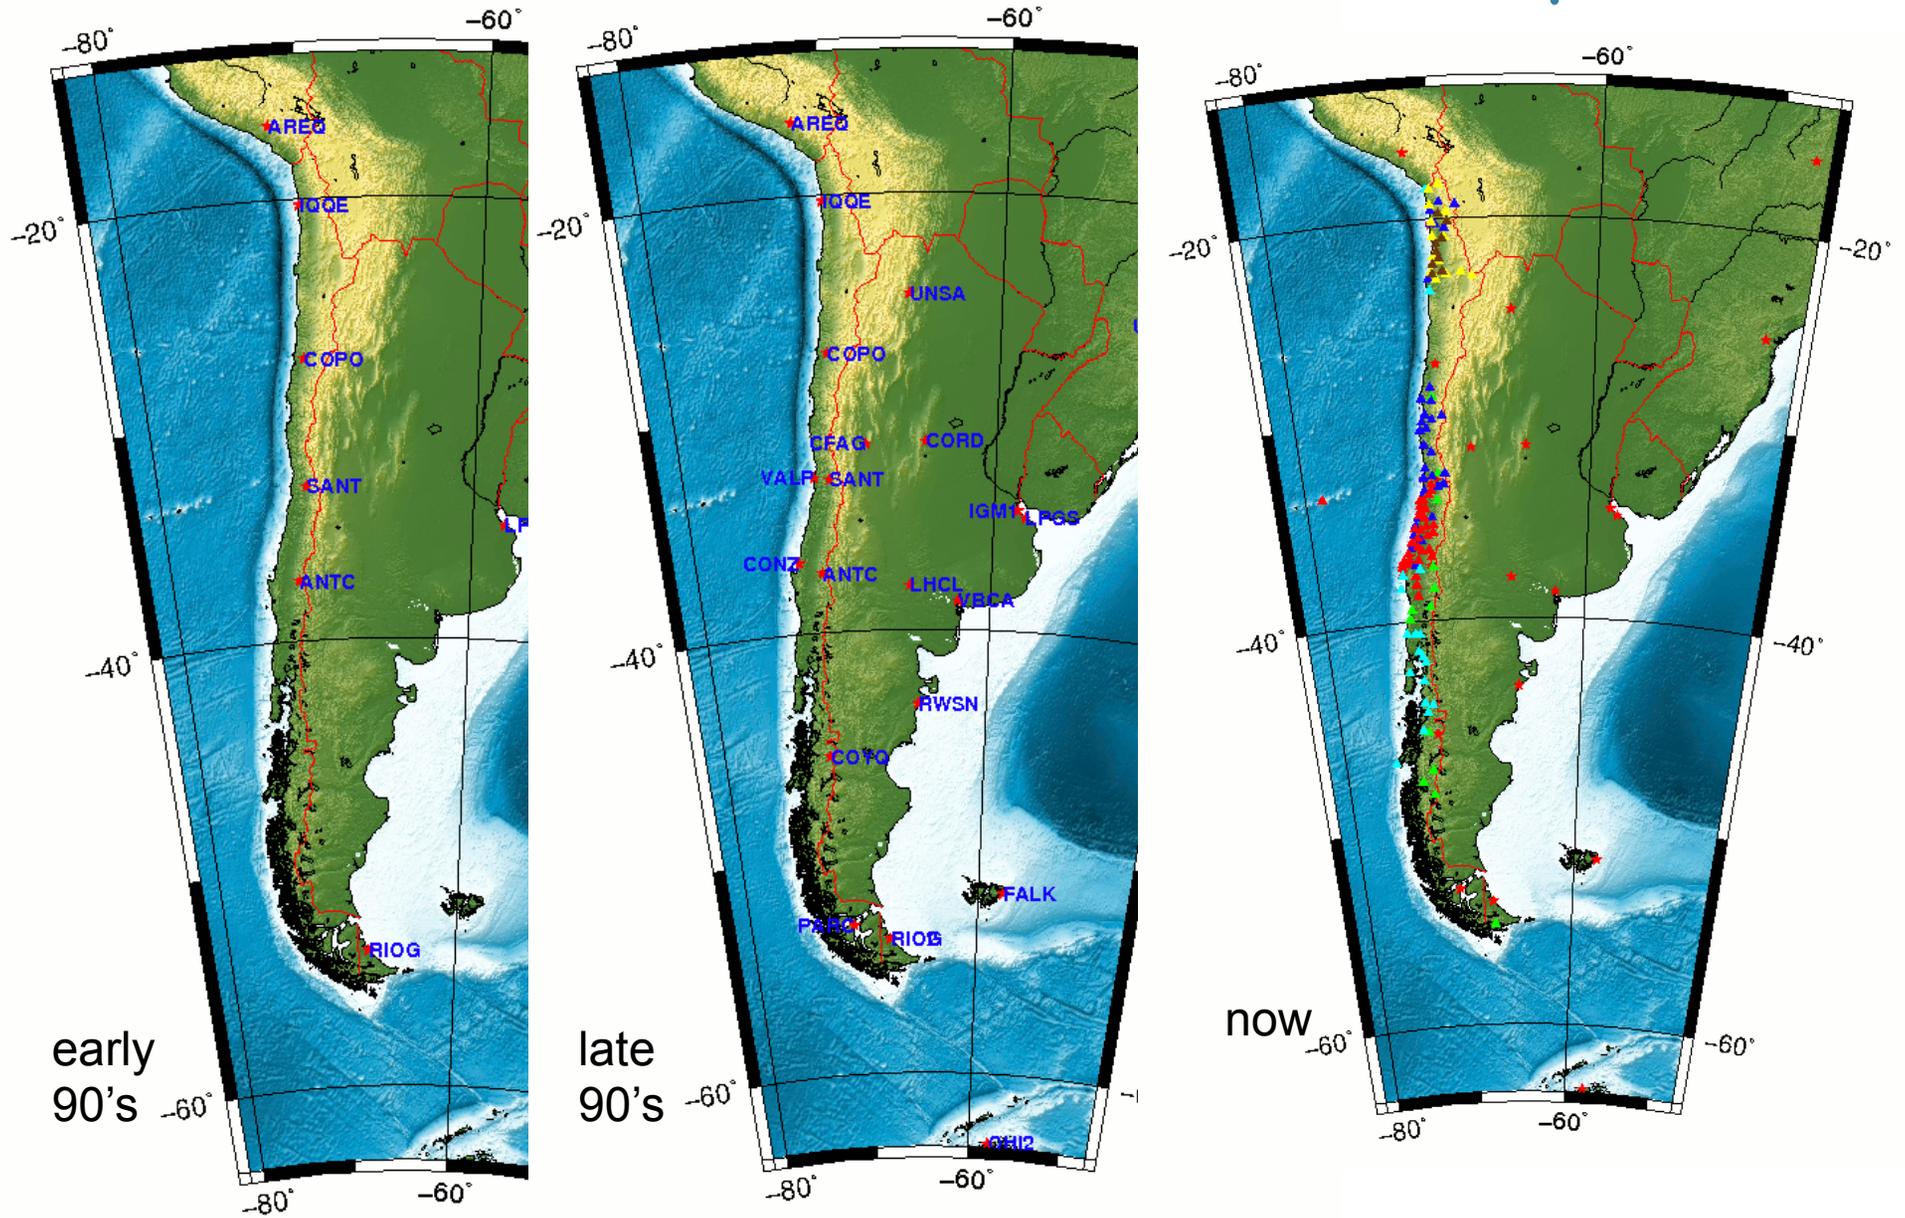

Wang et al, 2007

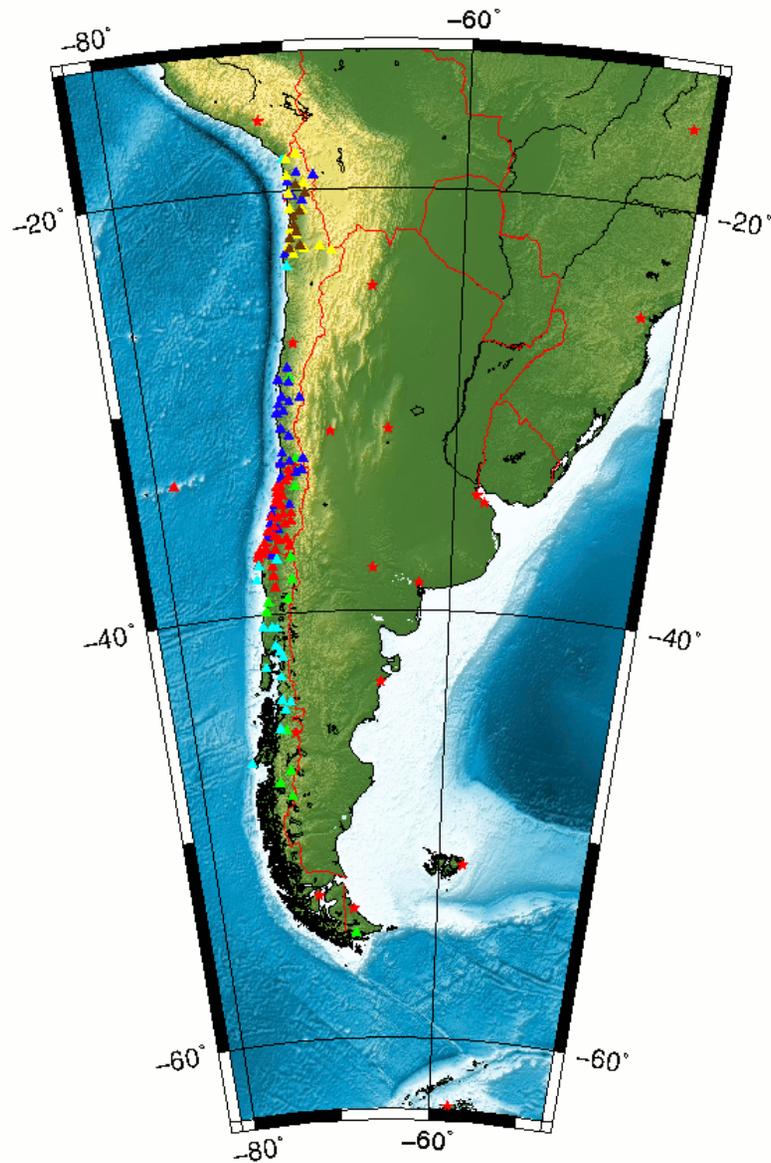

GNSS observation for:

- Seismic cycle
- Intra plate
- Fault systems
- Volcanoes (SERNAGEOMIN)
- Early warning

Status of all GNSS networks in Chile

Status of all GNSS networks in Chile

CAP/IGM/UDEC stations
UDEC/GFZ/IGM stations
IPGP/DFG stations
CALTECH stations
GFZ/IPGP/DGF stations

More than 151 C-GNSS

CSN current status

- 76 stations ready installed
- 54 remaining stations
- 130 in total for this project
- 40 with RTX capabilities
- 4 stations was vandalized
- Not all of them with good communications at the moment
- 92% are stations replaced from IPGP/CALTECH/CAP/FENIX (UNAVCO et al)
- 21 stations will be in a multi-parametric sites (velocities, acceleration and displacement)
- We have a open data policy!!!
jcbaez@csn.uchile.cl

CSN current status

jcbaez@csn.uchile.cl

Status of C-GNSS stations under CSN

Monumentation

Network design for EW

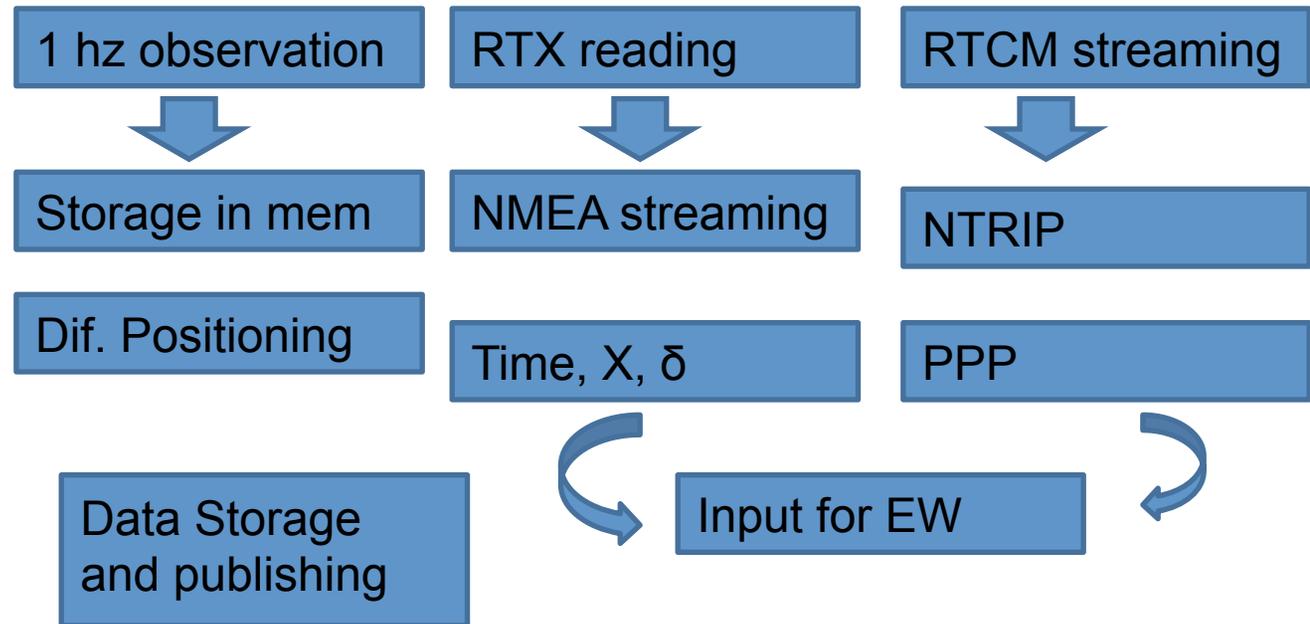

Detectability threshold of actual CSN network.
(Thanks Francisco del Campo)

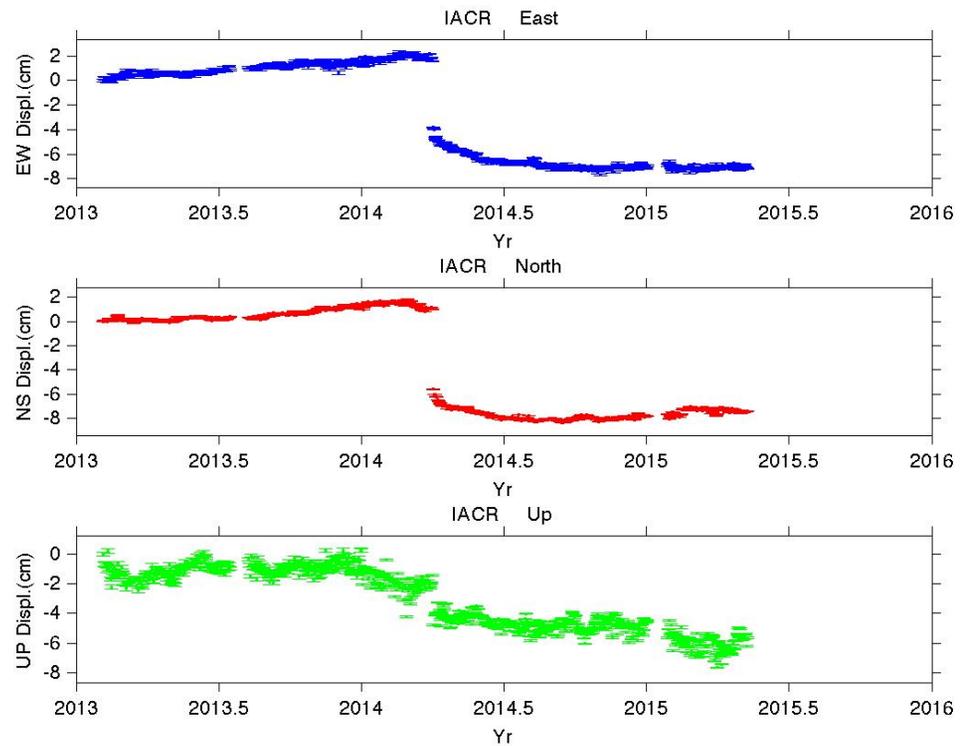

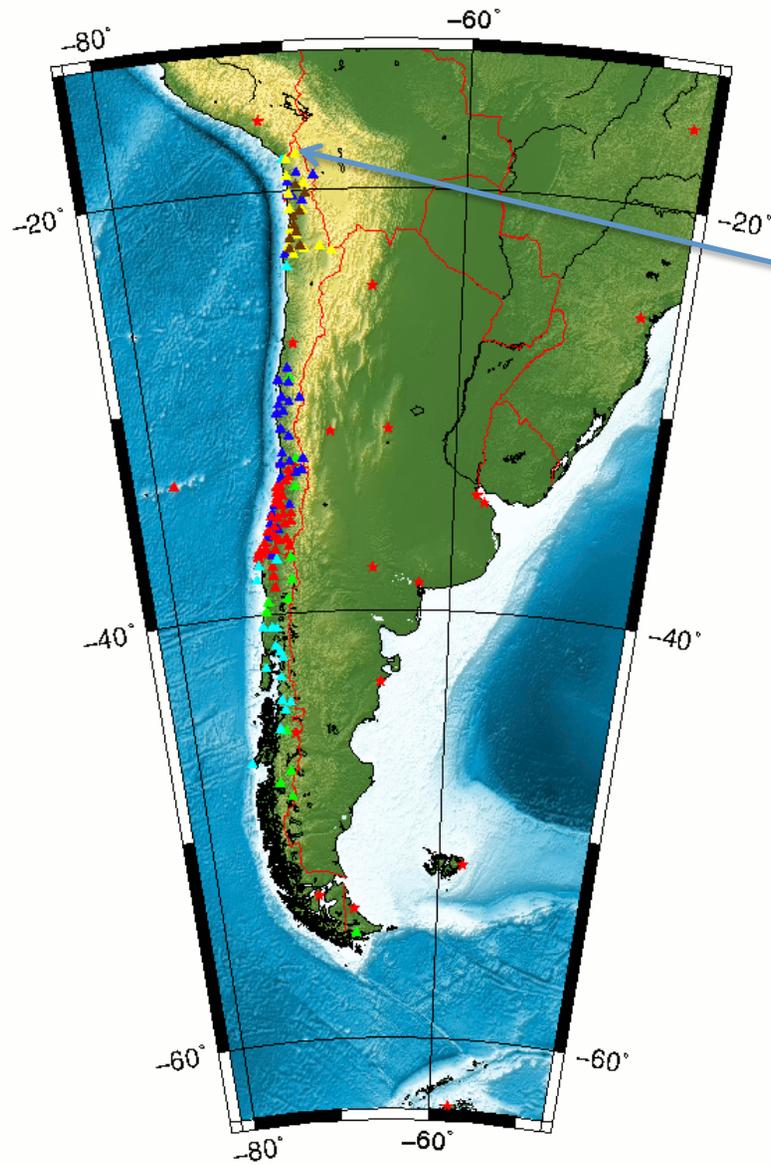

The scale of colors displays the minimum moment magnitude (M_w) to observe a 40 mm horizontal displacement due to an inter-plate earthquake.

- It is clear that coast-stations are more sensitive;
- For great earthquakes (>8.0) coast-stations still have better response, but inland stations become of increasing importance;
- We will increase the number of stations near to coast, to have one every 40 km

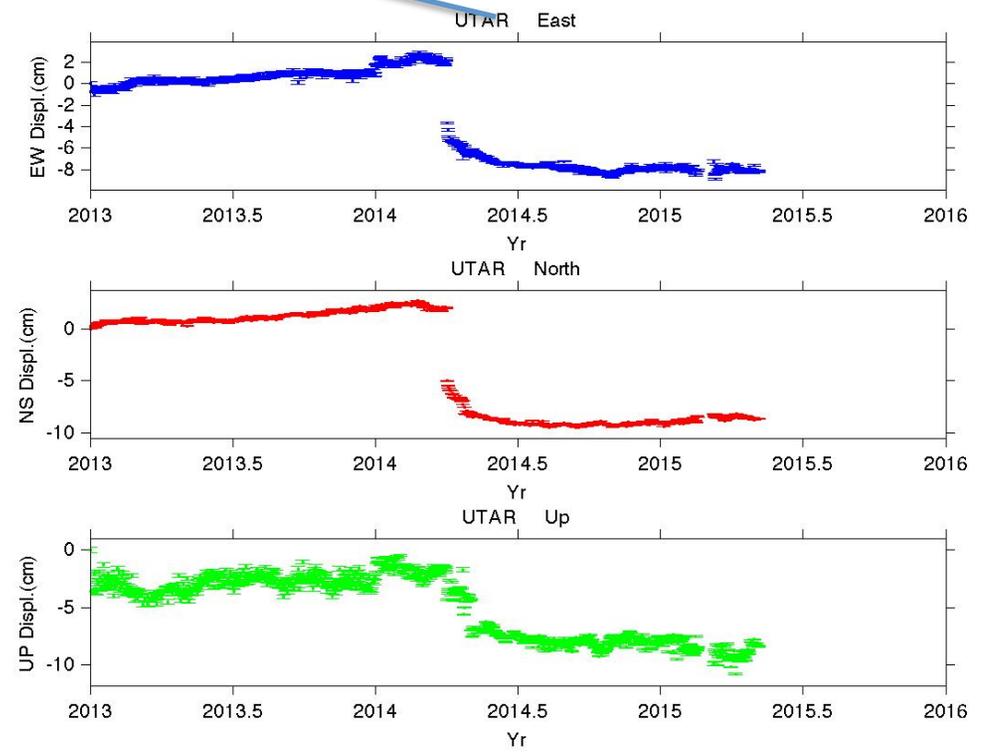

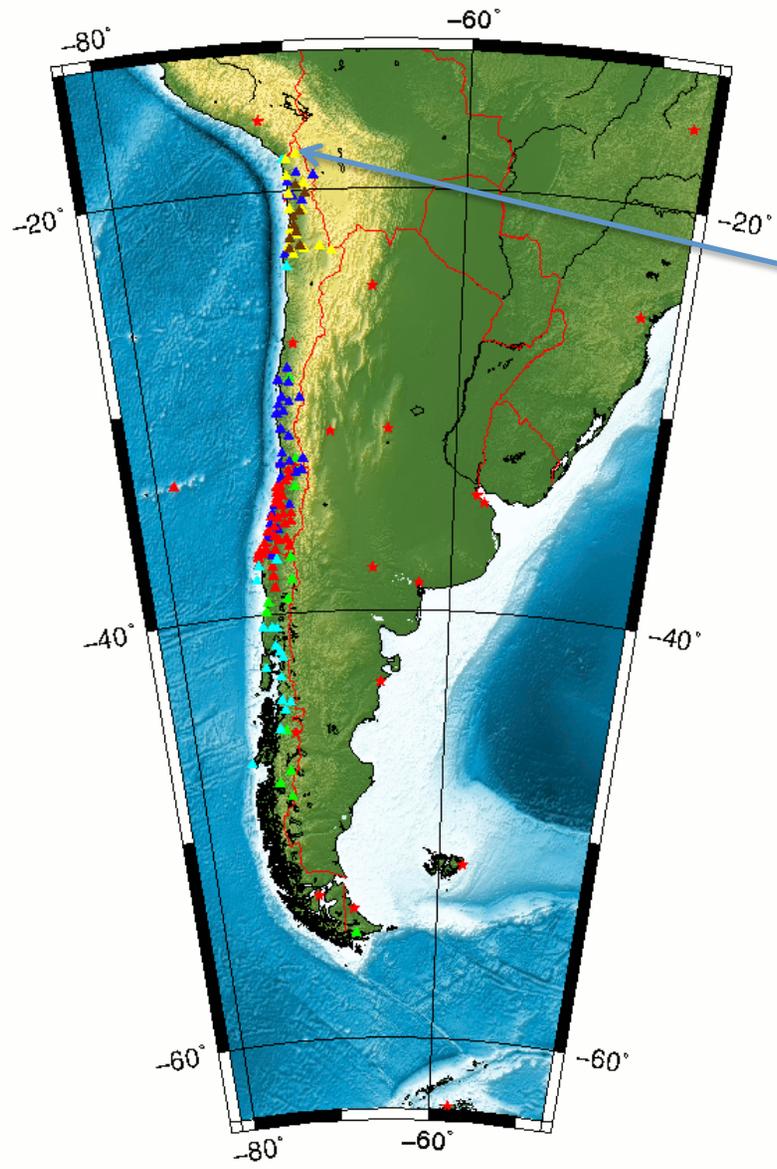

Schedule of CSN solutions

NRT PPP

The screenshot displays the BKG Ntrip Client (BNC) Version 2.9 interface. The main window is titled "Precise Point Positioning, Panel 2." and contains various configuration options for NRT PPP. The configuration is organized into several sections:

- Antennas:** /Users/cuentadejuancarlosbaez/Desktop/Bnc2-Mac/108.ATX
- ANTEX File:** TRM41249.00 NONE
- Antenna Name:** (empty)
- Basics:** Use phase obs
- Estimate tropo:** Use GLONASS
- Use Galleo:**
- Basics cont'd:** Sync Corr (sec) [empty], Averaging (min) [empty], Quick-Start (sec) [empty]
- Max Sol. Gap (sec):** [empty]
- Basics cont'd:** Audio response (m) [empty]
- Sigmas:** 10.0
- Code:** 0.02
- Phase:** [empty]
- Sigmas cont'd:** 100.0
- XYZ Init:** 100.0
- XYZ White Noise:** 0.1
- Tropo Init:** 3e-6
- Tropo White Noise:** [empty]

Below the configuration, there is a table showing the streams being processed:

Streams:	resource loader / mountpoint	decoder	lat	long	nmea	ntrip	bytes
1	kg3-dmz.gfz-potsdam.de:2101/UDECO	RTCM3.0	-37.5	-72.3	no	1	396.372 kB
2	products.igs-ip.net:2101/GS03	RTCM_3.0	50.08...	8.66458	no	1	85.578 kB
3	products.igs-ip.net:2101/RTCM3EPH	RTCM_3.0	50.08...	8.66458	no	1	747.596 kB

At the bottom, there is a "Log" section with tabs for "Log", "Throughput", "Latency", and "PPP Plot". The log shows a series of data points for UDECO PPP, including timestamps, coordinates, and various parameters.

Example log entry:

```
15-03-03 23:50:26 UDECO PPP 23:50:41.0 14 1537190.201 +- 0.067 -4829689.386 +- 0.035 -3859233.672 +- 0.028 NEU -0.334 -1.290 0.447
```

Results

Velocities field of Nazca plate locking rate deficiency

Báez & Bataille 2006

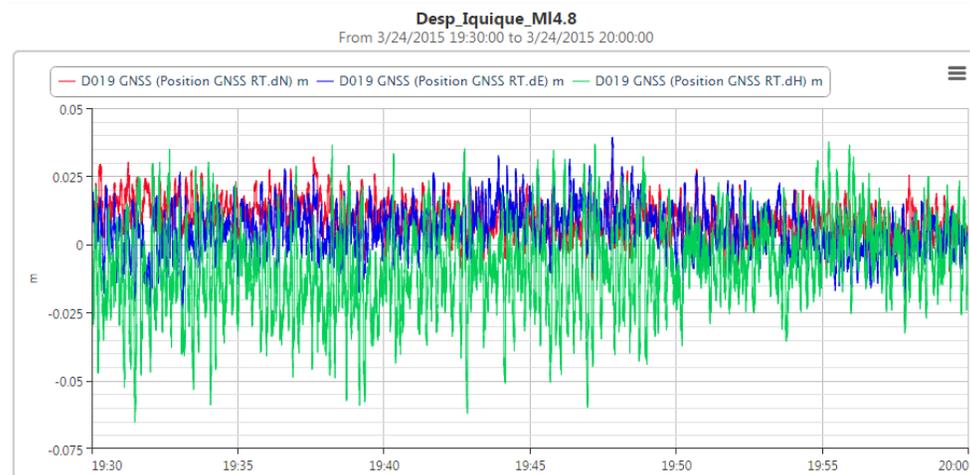

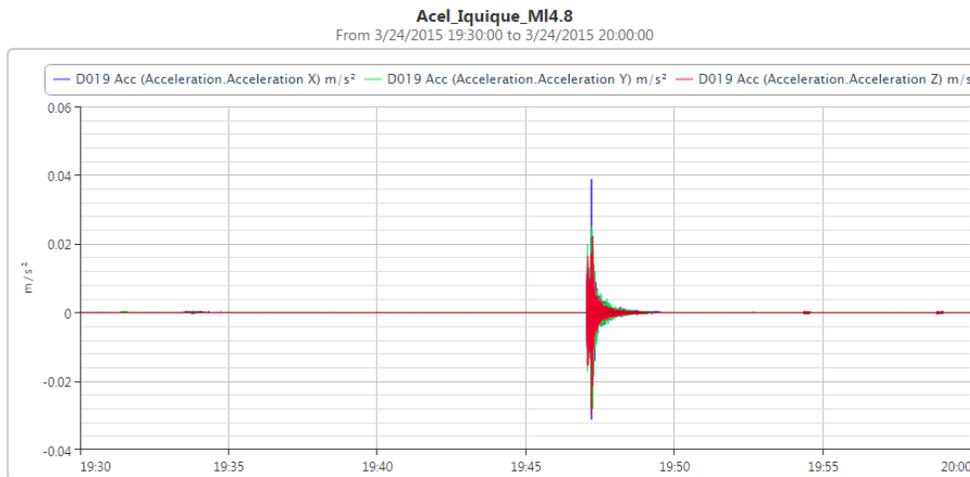

Baez et al 2015 (in preparation)

Results

Acceleration v/s displacement

We have displacement from GNSS and we integrate acceleration to correct displacement measurements Applying Kalman Filtering

(data from Trimble SG160-09)

Final Remarks

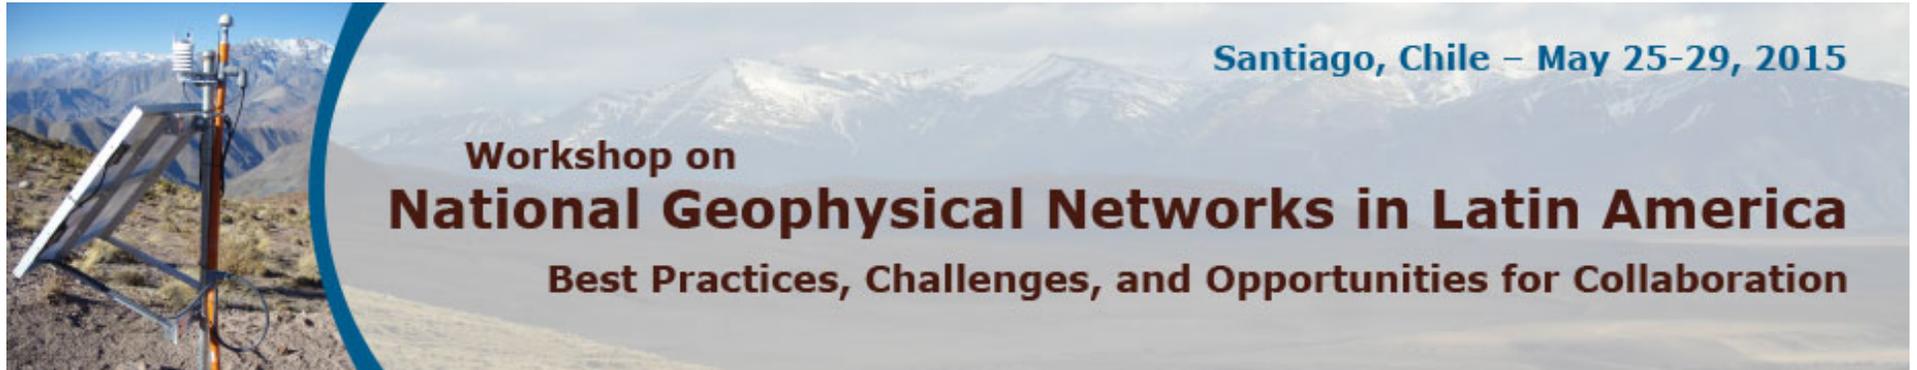

- Network need to be re-designed for EW
- Good communications are still the key of the system
- Redundancy of the system for NRT are strongly necessary (RTX – PPP)
- Filter applications is necessary for false-positive detections
- We need to implement our own software application to eliminate external dependencies
- Integrations of multi-sensor observations are our next step

Thanks to

Thanks you!!!!
